EXPERIENCE BYŌDŌ-IN
VIRTUAL REALITY TOUR

Experience Byōdō-In invites you into an exploration of Japanese history and culture. Step back in time and explore this remarkable temple complex through an immersive virtual environment where richly detailed 3D architecture, interactive discovery zones, animated characters and wildlife, and intuitive learning interfaces bring the past to life. Uncover the spiritual and cultural significance of this UNESCO World Heritage site as you move through its beautifully preserved grounds. Located in Uji near Kyoto, Byōdō-In was originally constructed in 998 AD and later transformed into a Buddhist temple in 1053 AD, dedicated to Amida Buddha and embraced by both Pure Land and Tendai traditions.

This VR application has been designed with the Unity game engine for use with Mechdyne's getReal 3D platform for Powerwall, CAVE and HMD systems. For questions about pricing, content, or technical considerations please contact Mechdyne or IDIA Lab.
