

*Experience Pantheon* transports you into one of the greatest achievements of ancient Roman architecture and engineering. Designed under Emperor Hadrian around 126 AD, the Pantheon's immense dome remains the largest unreinforced concrete dome in the world — a testament to Roman ingenuity. Watch as sunlight streams through the central oculus, creating dramatic celestial alignments throughout the year. Once a temple dedicated to all gods and later preserved as a Catholic church, this extraordinary monument endures as a powerful symbol of Rome's cultural legacy, religious influence, engineering brilliance, and imperial ambition.

This VR application has been designed with the Unity game engine for use with Mechdyne's getReal 3D platform for Powerwall, CAVE, and HMD systems. For questions about pricing, content, or technical considerations, please contact Mechdyne or IDIA Lab.
